

What is Nature?

First Grade

Objective:

Prepare students for a series of nature lessons.

Method:

Brief discussion.

Procedure:

1. Tell the class that you are going to be spending an entire week studying nature. Yay!
2. Ask them if they have ever been in nature. The kids will share their nature experiences. Some of them may not know what nature is.
3. Ask them what they think nature is. Where is it? What lives in it? How can I get there?
4. Tell them that nature is all around them. It is the bird we see fly outside our window and the little bug we find inside our house. Nature is our backyard, and it is also the mountains. Nature is everywhere, and we are living in it.
